

Cancers coming back with a vengeance is very common after the COVID vax

If I had a dollar for every person who has related a story about a friend whose cancer was in remission before the COVID jabs, then became uncontrollable shortly after the jab, I could retire...

The [DMED database](#) shows the **rate of cancer is up by 3X** after the COVID vaccines rolled out. See [ACT OF WAR: Thanks to COVID “vaccines,” the military’s cancer rate has more than TRIPLED](#)

In talking with Ryan Cole about this, he believes this is primarily due to accelerating existing cancers (ones people already know they have or recent cancers that people never realized were

there) rather than creating new cases of cancer.

Watch this video for more insight:

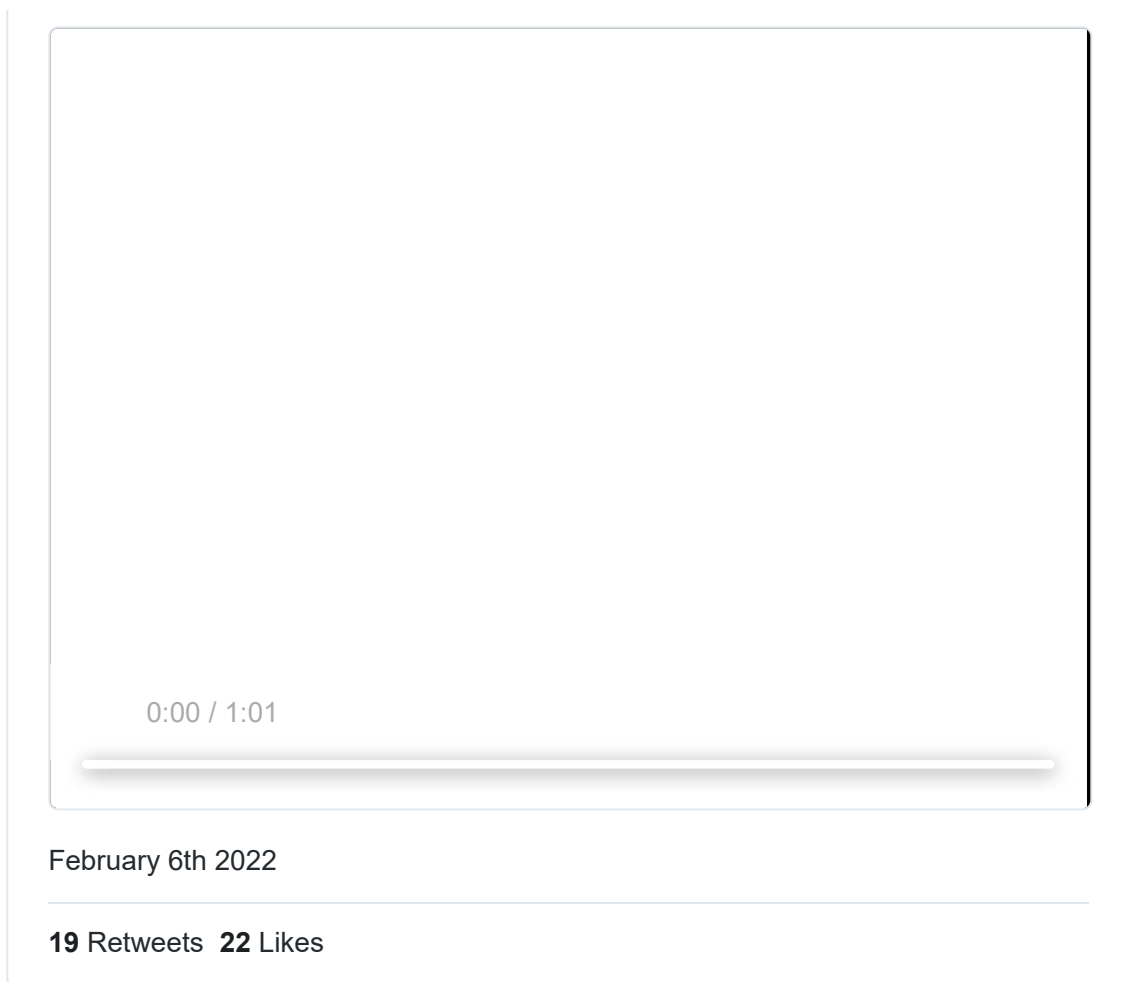

Watch this video of Dr. Byram Bridle:

@Xx17965797

!!Dr Byram Bridle talks about how COVID 'vaccine' affects cancer.

Consider these two emails I received on February 5, 2022 which are representative of comments I see all the time:

I watched the Second Opinion and was wondering if you found any information on something that was talked about. The topic I am interested in is the untranslated human genes added to the MRNA vaccines that were being discussed as possibly adversely affecting how the immune system goes after cancer cells--in order to reduce the inflammatory response to the vaccine. I have seen several articles published with case studies of specific patients who had a **massive progression of their cancer post vaccine.**

and

I know two people personally who now have a cancer that's pretty serious... I was talking to my doc yesterday and she said **one of her patients was diagnosed on Monday and dead by Thursday last week..** she had no previous cancer... 2XV@

This! I know three people whose cancer was in remission, got the jab and their cancer came back with a vengeance. Two now dead and the third back on systemic chemo. I fear for my other friends with the BRCA gene.

And these tweets suggest the vaccines can create new cancers:

Replying to @stkirsch

Also people in remission for one type of cancer then develop an unrelated cancer. Friend of friend was in remission then after vax developed a sudden cancer in her eye socket that doctors said was very rare. It spread quickly to the bone and blood.

My grown sibling took all vaxs mandated4 work & recently had benign neck tumor removed. Not cancerous but no history of it prior either. I would not be quick to state that jabs which greatly disable main DNA repair not likely to cause new cancers pple otherwise wouldn't have...

The bottom line is that don't be surprised when after the jab, you suddenly have a relapse or a new cancer.

Summary

If you've recently been vaccinated and your previously under control cancer is now out-of-control, it is highly likely that the cause is that "safe and effective" vaccine you took.

Free from breast cancer for 12 years. Got the COVID vaccines in February and March 2021. In August I had elevated cancer markers in my blood. By September I was diagnosed with metastatic breast cancer in my bones. Now I feel it's my responsibility to warn all my friends of the possibility that someone they know may be on the same path. Most cancers have no symptoms till it's too late. Get the word out. God bless all of us.

I am a parish nurse in an inner city church, and we got our first vaxxine injury call for help Thursday, the 10th. She's out of money, she's been fighting to survive since the place she worked closed it's doors January of last year. April of 2021 she got her first clot shot, in May 2021 she got the second, and in September she got boosted. 5 days after the second shot she started having strokes, and after the booster, she's had so many now the doctor lost count. She's only 52 years old, and will never work again. I am truly afraid of what's in store for all of us, because even the unvaxxed will be affected. God please help us and show us what to do! 🥺🥺
