You've spent the last year hearing stories of extreme and deadly side effects from the Covid-19 shots. Dr. Jane Ruby gave us the remarkable information that a huge percentage of side effects tracked in the CDC's VAERS database are linked to just a small percentage of the vaccine batches produced by Pfizer and Moderna.

This data came from a group calling itself Team Enigma. They're a group of independent researchers with experience in medical R&D, statistics, data analytics, and everything else you'd need to investigate a vaccine's impact on millions of people. And Team Enigma says, whatever else we know about the vaccines, something is clearly wrong, and it doesn't appear to be accidental. The shots are deadly, and no vials are safe.

Let's consider the flu vaccine. With that, most flu vaccine lots have less than 10 adverse events, and a lot have less than five. There are only two outlier groups, and they have a little over twenty and thirty-five adverse events, respectively. Overall, every lot has a number of adverse events between 1 and 37.

Now look at Covid injection lots. For these, according to Team Enigma, the number of adverse events ranges from 1 to 662. The volatility in the bioweapon lots is more than ten times greater. This raises a lot of questions, if true. Is the manufacturing process for these brand-new vaccines flawed, causing there to be more room for error and tainted products? If that's the case, are Pfizer and Moderna covering up the truth? Or are they not paying attention? Is anybody paying attention? Does anyone at the FDA care about safety or do they only care about jabbing as many people as quickly as they can?

A lot of Team Enigma is anonymous but thankfully one of their members has agreed to speak publicly. Sasha Latypova is a retired business executive with more than two decades of experience in pharmaceutical and medical device R&D. She specialized in collecting and analyzing data from global clinical trials, and she joins us now.

[Contact us](#) for guidelines on submitting your own commentary. Red Voice Media would like to make a point of clarification on why we do not refer to any shot related to COVID-19 as a "vaccine." According to the CDC, the definition of a vaccine necessitates that said vaccine have a lasting effect of at least one year in preventing the contraction of the virus or disease it's intended to fight. Because all of the COVID-19 shots thus far available have barely offered six months of protection, and even then not absolute, Red Voice Media has made the decision hereafter to no longer refer to the Pfizer, Moderna, or Johnson & Johnson substances as vaccinations.
