## Vaccination consequences: BKK health insurance company writes a letter to the Paul-Ehrlich-Institut

The health insurance company BKK has evaluated millions of insured data. The number of cases given by the Paul Ehrlich Institute for the consequences of vaccination are therefore too low.

A large German health insurance company has recorded figures on the side effects of Covid vaccines. The result was "a significant alarm signal". According to the BKK ProVita, the number of side effects is many times higher than those officially announced by the Paul Ehrlich Institute (PEI). A letter to the PEI (available to the Berliner Zeitung) states: "In our opinion, there is a significant underreporting of the side effects of the vaccination". The board of directors of BKK ProVita, Andreas Schöfbeck, said to the world: "According to our calculations, we consider 400,000 visits to the doctor by our insured persons due to vaccination complications to be realistic to date."

### **Underreporting of vaccination consequences? Paul Ehrlich Institute reacted**

The health insurance company had the data of millions of insured persons of the BKK group analyzed. Based on the evaluated data, Schöfbeck also comes to the conclusion that "a risk to human life cannot be ruled out". Schöfbeck has now sent a letter to Prof. Dr. Klaus Cichutek, the President of the Paul Ehrlich Institute. The letter also went to the National Association of Statutory Health Insurance Funds, the German Medical Association, the National Association of Statutory Health Insurance Physicians, the Standing Vaccination Commission and the BKK umbrella organization. The Berliner Zeitung publishes the letter with the headline "Strong warning signal for coded vaccination side effects after Corona vaccination".

**The letter in full:**

reported for the 2021 calendar year. The data available to our company give us reason to assume that there is a very significant underreporting of suspected cases of vaccination side effects after corona vaccination. I am enclosing an evaluation with my letter

The data basis for our evaluation is the billing data of the doctors. Our sample is taken from the anonymized database of the company health insurance funds. The sample includes 10,937,716 insured persons. So far, we have the doctors' billing data for the first half of 2021 and about half for the third quarter of 2021. Our query contains the valid ICD codes for vaccination side effects. This evaluation has shown, although we do not yet have the complete data for 2021, that based on the available figures, we are already assuming 216,695 treated cases of vaccination side effects after corona vaccination from this sample.

### Corona

## Quality of the vaccine: chemists ask questions to the Paul Ehrlich Institute

If these figures are extrapolated to the year as a whole and to the population in Germany, it is likely that 2.5–3 million people in Germany received medical treatment because of side effects of vaccination after the Corona vaccination. We see this as a significant alarm signal that must be taken into account when the vaccines are used further. In our opinion, the figures can be validated relatively easily and also at short notice by asking the other types of insurance (AOKen, substitute health insurance companies, etc.) to evaluate the data available to them accordingly. Extrapolated to the number of vaccinated people in Germany, this means that around 4–5 percent of the vaccinated people were in medical treatment because of vaccination side effects.

In our opinion, there is a significant underreporting of vaccination side effects. It is important to identify the causes

us that it takes about half an hour to report suspected vaccine damage. This means that 3 million suspected cases of vaccination side effects require around 1.5 million working hours for doctors. That would be almost the annual workload of 1,000 doctors. This should also be clarified in the short

Therefore, a copy of this letter is also sent to the German Medical Association and the National Association of Statutory Health Insurance Physicians. The National Association of Statutory Health Insurance Funds also receives a copy of this letter with the request to obtain appropriate data analyses from all health insurance companies. Since danger to people's lives cannot be ruled out, we ask you to respond to the measures taken by February 22, 2022, 6 p.m.

Kind regards

Andreas Schöfbeck Board of Directors
