A lawsuit filed by Public Health and Medical Professionals for Transparency produced documents from Pfizer revealing that its Covid-19 vaccine caused all of the pregnant women in its trial to miscarry.

The report, titled “Cumulative Analysis of Post-authorization Adverse Event Reports (<https://drtrozzi.org/wp-content/uploads/2022/01/Pfizer-Cumulative-Analysis-of-Post-authorization-Adverse-Event-Reports.pdf>),” describes events reported up to February 2021 and shows that not a single pregnant woman who took the Pfizer vaccine delivered a live baby.

Table 6 of the report, titled “Missing Information,” reveals under the first topic of “Use in pregnancy and lactation” the following statement:

“Pregnancy outcomes for the 270 pregnancies were reported as spontaneous abortion (23), outcome pending (5), premature birth with neonatal death, spontaneous abortion with intrauterine death (2 each), spontaneous abortion with neonatal death, and normal outcome (1 each). No outcome was

statement: “no outcome was provided for 238 pregnancies.”

One outlet (<https://www.canadiancovidcarealliance.org/>) (<https://www.canadiancovidcarealliance.org/>) reported (<https://www.canadiancovidcarealliance.org/>): “We have no idea what happened with 243 (5 + 238) of the pregnancies of these injected women; they have just not been included in the report.

“What we do know is that of 27 reported pregnancies (270 subtract 243), there are 28 dead babies! This appears to mean that someone was pregnant with twins and that 100 percent of the unborn babies died.”

It is possible that the five “outcomes pending” may have resulted in a normal and healthy delivery, but this remains unclear. This means, that at best, 87.5 percent of babies within fully vaccinated wombs died as opposed to 100 percent.

Regardless, this is still an incredibly horrific and disgusting outcome. No babies should be dying as a result of these “safe and effective” vaccines, and no mother should be harmed in the process.

Pfizer sneakily attempted to cover this up with an article titled “Safety and Efficacy of the BNT162b2 mRNA Covid-19 Vaccine,” which was published in the New England Journal of Medicine (NEJM) (<https://www.nejm.org/doi/full/10.1056/NEJMoa2034577>) on Dec. 31, 2020.

I'm not at all sure how your getting 87.5% of babies died when you say 270 pregnancies outcomes were not reported ? You do say that 27 pregnancies ended with the deaths of the unborn babies, which if true is shocking. But your own figures do not support your assertion that

If you look at the NEJM study referenced late in the article and actually read the data instead of just the conclusions, the data suggested that for pregnant women who received a jab in the 1st or 2nd trimesters of pregnancy 89% of the pregnancies ended in "spontaneous abortion"

That isn't true. I read the NEJM study referenced, and it does not even mention spontaneous abortion, it says that a future study will address outcomes in pregnant women. A study addressing safety of the Pfizer vaccine was published in June last year, and found that:

"Among 827 participants who had a completed pregnancy, the pregnancy resulted in a live birth in 712 (86.1%), in a spontaneous abortion in 104 (12.6%), in stillbirth in 1 (0.1%), and in other outcomes (induced abortion and ectopic pregnancy) in 10 (1.2%)."

Those figures are well within the expected range for those negative outcomes (e.g. spontaneous abortion and stillbirth) in the general population i.e. there is no reason at all to think the vaccine has any negative effects on pregnancies..

Gene therapy changes our DNA, Since there is no possible way mRNA vaccines can change our DNA they are not gene therapy. They can't get into the nucleus, where our DNA is, and even if they could they have no way of changing DNA. Even if they did change out DNA (they can't), you would just have a few muscle cells with altered DNA. There is no evidence that people have been killed by the vaccine except very, very rarely.

Only problems with the pregnancies were reported, since those 270 pregnancy outcomes were not reported, they were almost certainly normal live births. The background rate of spontaneous abortion is about 10%, sadly, so 27 out of 270 pregnancies ending in miscarriage is exactly what you would predict in an unvaccinated population.

Is there some contradictory information in two articles today?

See another Expose article from today – “The Billion Lives Covid-19 Fraud: The Vaccinated & Boosted have 3 years to live”

It says – “for those whom Pfizer excluded from their Phase III vaccine trials” – and in the list – “Women who are pregnant or breastfeeding”.

> have I misunderstood something

Yes. Study A was written to make you believe X and study B was written to make you believe Y. A and B are completely unrelated, as are X and Y.

According to wikipedia, the blm woman, who's purchased millions in 'property' over the last year, is a saint who's net income was 'only' \$120,000. According to the US tax people, she's under investigation for fraud. You see how your 'understanding' varies depending on who's spouting at you?

I could be completely wrong here but my guess is that that they were included in phase 1 and/or phase 2 trials but removed from the phase 3 trials, possibly due to the rate of miscarriages. I had heard that pregnant women weren't ignoramus in any of the trials but you know how ight goes these days, there seems to be 37 opposing "facts" for every question 🤔

The study was from Dec 2020 – February 2021. The 238 babies were not born in the 3 months, because gestation is closer to 10 months long. The study needs to be updated now that we are beyond normal pregnancy term, but it is likely that those 238 were still pregnant as of February 2021.
