public as it continues to hide facts especially on serious adverse effects of Covid-19 vaccines, particularly for minors 5 to 11 years old.

Dr. Erwin Erfe, also a practicing lawyer and PAO Forensics Division director, told Judge Maria Cherell de Castro-Sansaet of the Quezon City Regional Trial Court's Branch 222 that the DoH has been keeping to itself critical information about the vaccines.

"Here is another example of bad faith or deception [of] the public committed by the DoH. I have come across an article published

Sugar retail price hits P100 a kilo

BY BELLA CARIASO

THE retail price of refined sugar in local markets has reached P100 a kilo, the Department of Agriculture (DA) said on Thursday.

Refined sugar is being sold for as high as P100 a kilo in Metro Manila and other parts of the country, the DA said. In Quezon City, Pampanga, and other parts of the country, the price has reached P100 a kilo, the DA said. In an interview with The Manila Times, Agriculture Undersecretary Rito S. Evangelista said the rise in the sugar supply.

Evangelista confirmed the statement of Sugar Regulatory Administration (SRA) in an interview with The Manila Times.

Development critical RESURKINA

Kids: Vaccination for 5 to 11 years old starts February 7. The DoH stated in the article, 'We are further encouraged by data

globally showing that [in the case of] the over 8.7 million vaccinated children, there have been no reports of deaths attributable to the vaccines. Among those vaccinated, 97.5 percent did not experience any side effects, while 2.4 percent experienced mild effects,'" Erfe said.

But, according to him, reports from the US Centers for Disease Control and Prevention (CDC)

reporting system) reports were for non-serious events and 2.4 percent were for serious events, which included seizures, increased troponin (indicative of cardiac damage or injury), myocarditis, pericarditis and deaths.

"Based on the foregoing, the DoH may be intentionally misinterpreting data to downplay the adverse effects of the vaccine[s] and eventually deceive the public of the same, completely affecting their [parents'] intelligent judgment whether to have their children inoculated with Covid-19

be protected.

He said the children lack rational decision-making capacity to intelligently and legally consent to matters that will greatly affect their health and interest, more importantly on matters where they are subjected to research and experimentation because of the administration of an "experimental vaccine."

"These children cannot understand the potential risks, recognized under Republic Act 11525 [and by] the CDC and the Philippine Food and Drug Administration, consequent to

introduced the Dengvaxia to the public and its eventual rollout on mass vaccination."

"It is worthy to note that the Department of Health is now rolling out the Covid-19 vaccination among children ages 5 to 11 and the DoH is committing the same negligence, misrepresentation, misinformation, and with bad faith, the rolling-out of the Covid-19 vaccination, particularly, to children," Erfe added.

The PAO forensics chief said the DoH has a "duty to disclose, in the exercise of reasonable care,

Pharmacologist-toxicologist Dr. Romeo Quijano also told the court about the alleged danger and hazard to human health of the vaccines that he described as obsolete.

"For sure, there are already a big number of people who have suffered seriously and others have died after being inoculated with the Covid-19 vaccines and more are still suffering as a result," Quijano said.

He added that the DoH did not completely disclose the deaths and serious side effects like anaphylaxis (severe allergic

heart); blood clotting and other blood disorders; loss of consciousness, convulsion and balance disorder; paralysis and severe pain (headache, body pain, joint pain); respiratory depression, chest discomfort and dysphagia; confusion, hallucination, sleep disorder; and blurred vision, diplopia, eye pain, tinnitus and vertigo.

Quijano said the Philippines FDA had reported serious adverse effects like hypersensitivity including severe allergic reactions; increased blood pressure; thrombosis-thrombocytopenia syndrome;

Guanam-Dano Syndrome, Dengue

palsy; and immune thrombocytopenia.

The DoH, he said, would always stress that the possible side effects of a vaccine include pain, redness, itchiness or swelling at the injection site (which may last a few hours); fever; feeling of weakness or fatigue; headache; dizziness; diarrhea; or nausea.

"They never mentioned the serious side effects," Quijano noted.
