([LifeSiteNews](#)) — Nobel Prize laureate Dr. John Clauser’s talk at the International Monetary Fund (IMF) has been canceled following his outspoken criticism of the “climate change” agenda.

Clauser, who won the Physics Nobel Prize in 2022, “was to present a seminar on climate models to the IMF on Thursday and now his talk has been summarily canceled,” according to a [press release](#) by the CO2 Coalition, an organization critical of the mainstream climate narrative that Clauser joined in May 2023.

“According to an email he received last evening, the Director of the Independent Evaluation Office of the International Monetary Fund, Pablo Moreno, had read the flyer for John’s July 25 zoom talk and summarily and immediately canceled the talk,” the press release continues, adding that “Technically, it was ‘postponed.’”

Patrick Moore, a former Greenpeace activist and now a member of the CO2 Coalition, also [insinuated in a tweet](#) that “postponed” means that Clauser’s talk is effectively canceled.

Clauser made headlines recently when he said during a speech at the “Quantum Korea 2023” event that he does not “believe there is a climate crisis.”

Clauser added that “key processes are exaggerated and misunderstood by approximately 200 times” and accused the Intergovernmental Panel on Climate Change (IPCC) of spreading misinformation.

The renowned physicist has furthermore criticized U.S. President Joe Biden’s climate policies and the fact that the 2021 Nobel Prize was awarded for work done on computer models predicting “climate change.” Clauser has criticized the faulty models used by the IPCC and others that he stresses ignore important factors.

Clauser has developed climate models that emphasize the impact of cumulus clouds reflecting sunlight, which cover around half of the Earth on average and has argued that temperature changes caused by the levels of carbon dioxide in the atmosphere are “nearly two orders of magnitude smaller” than the impact of the cumulus clouds, rendering it negligible by comparison.

Commenting on climate alarmism, Clauser has [said](#) that “The popular narrative about climate change reflects a dangerous corruption of science that threatens the world’s economy and the well-being of billions of people.”
