Developed countries, the big winners are countries that have shrinking populations. That's something that most people never talked about. You know, we all used to think shrinking population is a cause for negative growth. But in my conversations with the leadership of these large developed countries that have xenophobic anti immigration policies, they don't allow anybody to come in shrinking unemployment. Excuse me, tricky demographics. These countries will rapidly develop robotics and tech in AI and technology. And it's a promise I didn't say it's going to happen but of the promise of all that transforms productivity, which most of us think it will, we'll be able to elevate the standard of living a country's the standard of living individuals, even with shrinking populations. And so the paradigm of negative population growth is going to be changing and the social problems that one will have in substituting humans for machines, because it'd be far easier. And those countries that have declining populations, and so for those countries that have rising populations, the answer will be education and so rapidly develop, you know, for those countries that do not have a foundational rule of law or education. They're going to be left that's where the divide is going to get more and more extreme and unfortunately.
