BREAKING NEWS

Pfizer whistle-blower says about a third of Pfizer's covid injections contained graphene oxide, but the debate continues

BY RHODA WILSON ON MAY 20, 2024 • (10 COMMENTS)

Last week, Pfizer whistle-blower Melissa McAtee said that Pfizer's internal database had evidence from a laboratory in Spain that up to a third of covid injection vials contained graphene oxide (<https://expose-news.com/?s=%22graphene+oxide%22>).

Melissa McAtee worked for Pfizer while their covid mRNA products were in development. When she became aware of the problems taking place in her facility, McAtee became a whistle-blower.

From communications among staff about contaminants in the injections to blacked-out windows when the US Food and Drug Administration (“FDA”) inspectors made their rounds, she refused to stay silent when the injectables were set to be rolled out to the public.

On CHD.TV's *'Doctors & Scientists'* (<https://live.childrenshealthdefense.org/chd-tv/shows/good-morning-chd/former-pfizer-employee-reveals-contaminations-in-covid-vaccines/>) last week, Melissa McAtee (<https://x.com/MelissaMcAtee92>) laid out all she collected, observed, and discovered in the process of digging up the truth about the Big Pharma giant.

During the interview, she discussed the presence of graphene oxide in covid injections.

“The first thing I found was in ... June or July of 2021, and it was a graphene oxide report from Spain that this lab had found graphene oxide in one vial of Pfizer vaccine that didn't have a full dosage in it,” McAtee told Brian Hooker.

The whistle-blower added, “And so, they compared it under a microscope to 100 per cent graphene oxide and they determined that it looks almost identical, but requested more samples so that they could do a more structural chemical analysis than just visual.”

McAtee said that “later, much later, I followed up on them to see what happened, and if I remember correctly, 28 vials out of a hundred did have graphene oxide, of the Pfizer vials.”

The Pfizer whistle-blower goes on to note that the Spanish laboratory “requested more and when ... I found this on the internal Pfizer database, I didn't know it was the internal Pfizer database, I actually thought it was just internet public knowledge. But I shared that report on my Facebook and I got a call not long after that, I don't know how long, but not long after that from a Pfizer lawyer telling me that I had to take down the post because that was company property. And that's when I realised, ‘Hey, I guess I can see [Pfizer's] internal database ...”

McAtee searched the database for the code “HEK 293T” and the first returned in the search results were emails in which Pfizer executives and communications department were conspiring to hide that aborted foetal cell lines were used in the development and confirmatory tests for the vaccine. This was because of the Vatican's stance on encouraging the public to get the vaccine.

HEK 293T (https://encycloreader.org/r/wikipedia.php?q=HEK_293_cells) is code for “human embryonic kidney 293T cells.” The “T” in HEK 293T refers to the presence of the Simian Vacuolating Virus 40 (“SV40”) large T-antigen. The SV40 T-antigen (https://encycloreader.org/r/wikipedia.php?q=SV40_large_T_antigen) is a protein and is a dominant-acting oncoprotein, a gene that has the potential to cause cancer.

According to McAtee, the covid vaccine manufacturers did not include HEK cells, they were only used in the development of the vaccines.

McAtee has documented her testimony in the form of a slide share which you can read [HERE](https://docs.google.com/presentation/d/1HXZ43qkrlqza95RnCrETzciWmVMQXbT3/edit#slide=id.p1) (<https://docs.google.com/presentation/d/1HXZ43qkrlqza95RnCrETzciWmVMQXbT3/edit#slide=id.p1>).

Please stop this.

This was not used in manufacturing it was as used in testing the product.

As the document clearly states.

5:59 AM · Nov 14, 2023

AP fact-checkers also used the point Jikkyleaks noted about Pfizer's document to debunk the claim that Pfizer's covid injections contained graphene oxide.

On 7 April 2023, the *Associated Press* said (<https://apnews.com/article/fact-check-fda-pfizer-document-vaccine-graphene-oxide-988165173107>) that the document being cited online does not say anything about vaccine manufacturing but instead describes using graphene oxide during a process of evaluating the vaccine's spike protein under a microscope.

So, Pfizer's document is not sufficient to prove the presence of graphene oxide in Pfizer's covid "vaccines" that were administered to the public.

However, as Sense Receptor noted in a tweet (<https://x.com/SenseReceptor/status/1791565024336470520>) when sharing McAtee's interview above, graphene oxide is commonly studied as a material for gene-delivery nanoparticles and added a link to a 2019 paper (<https://www.precisionnanosystems.com/resources-and-community/knowledge-center/publications/detail/microfluidic-generated-lipid-graphene-oxide-nanoparticles-for-gene-delivery>) published in *Applied Physics Letters*.

As we read the excerpt from the abstract of the paper below, we should recall that, as Dr. Ah Kahn Syed explained (<https://expose-news.com/2023/10/03/plasmidgate-plasmid-dna-in-pfizer-and-moderna/>), the lipid nanoparticle used in mRNA injections is a cationic lipid (<https://expose-news.com/?s=%22cationic+lipid%22>) particle.

Graphene oxide (GO) is employed in a broad range of biomedical applications including antimicrobial therapies, scaffolds for tissue engineering, and drug delivery, among others. However, the inability to load it efficiently with double-stranded DNA impairs its use as a gene delivery system. To overcome this limitation, in this work, the functionalisation of GO with cationic lipids (CL) is proficiently accomplished by microfluidic manufacturing.

Out of 100 vials tested by a laboratory in Spain, 28 vials were found to contain graphene oxide. A study of a larger sample needs to be done to establish how widespread the use of graphene oxide is in terms of the number of vaccine batches, and when and where they were manufactured. So, the debate of whether Pfizer's mRNA injections that were administered to the public contain graphene oxide continues. Or as the late Dr. Andreas Noack (<https://expose-news.com/2021/12/07/did-german-chemist-dr-andreas-noack-die-after-direct-energy-weapon-attack/>) pointed out, the University of Almeria's Professor Pablo Campra (<https://expose-news.com/2021/07/10/the-real-pandemic-covid-19-or-graphene-oxide-poisonous-nano-material-found-in-covid-vaccines-and-face-masks/>) (as publicised by the Spanish podcast *La Quinta Columna* (<https://expose-news.com/?s=%22La+Quinta+Columna%22>)) did not find graphene oxide but rather graphene hydroxide (<https://expose-news.com/?s=%22graphene+hydroxide%22>).
