## SUMMARY KEYWORDS

NIH funding, vaccine mandates, myocarditis risks, six-foot rule, political preferences, NIH hierarchy, health data standards, COVID vaccine risks, public health, vaccine approval, FOIA requests, government incompetence, vaccine effectiveness, public trust, healthcare system

## SPEAKERS

James O' Keefe, Raja Cholan, Undercover Journalist

---

**U** Undercover Journalist 00:03  
NIH, now that you were working there,

**R** Raja Cholan 00:05  
I probably shouldn't be like saying this out loud. They might have funded Wuhan, a lab in Wuhan, China to, like, make Pfizer and Moderna from all these vaccine mandates.

**J** James O' Keefe 00:17  
Raja Cholan is with the National Institute of Health

**R** Raja Cholan 00:20  
For other vaccines like measles or whatever, you have to go through several hours of approval, but these accelerated through the approval.

**U** Undercover Journalist 00:29  
Do you think that of like the myocarditis?

**R** Raja Cholan 00:35  
I think we're all going to learn when it's too late.

James O' Keefe 00:37

I think that's important the lack of effectiveness of the vaccine product like

Raja Cholan 00:42

the six foot rule. Remember that, like that wasn't quite based on any real evidence that that did anybody. It was completely made up.

James O' Keefe 00:54

Raja then brings up politics. Talks about which political party he prefers and what would happen to him and NIH under an incoming Trump administration.

01:04

I think it would be worse for the NIH. I think it would be better for a Democrat to be in office. We sometimes fly under the radar of like the really Street guys. I don't think it would affect me. I don't think I have too much to worry about that's not recorded.

01:18

I

James O' Keefe 01:24

Raja Cholan is with the National Institute of Health, or NIH, and has only been on the job for two months.

Raja Cholan 01:31

All the other branch chiefs are like, 55 Wow. And I don't know shit. I know about the, like subject matter, but I don't know about any of the government like, how budgets work, or how like a hierarchy works.

James O' Keefe 01:45

In his role, Cholan oversees 40 people and heads up the health data standards branch for a division of NIH called the National Library of Medicine. So the US National Library of Medicine, you can think of it as the nation's health library, all the major peer review journals are there, and they have electronic databases, electronic cataloging. They manage the PubMed application that makes all this information available to the general public. They manage clinical

trials.gov which is the application that summarizes clinical trial results, and it appears that what Mr. Cholan's division this health data standards, is responsible for is analysis of visual data. This is X ray and MRI data, analyze and develop new capabilities that will make these kinds of information and data more generally available for searching while he admits he may know nothing about the bureaucracy, he says he knows a lot about public health.

**U** Undercover Journalist 02:52

What do you think about the NIH now that you were working there?

**R** Raja Cholan 02:55

Basically lots of my cousin is like, Yeah, well, I don't, so I'm not. Probably shouldn't be, like, saying this out loud, I haven't gotten the latest COVID shots, and I'm not going to mix evidence about if it really does anything.

**J** James O' Keefe 03:11

Cholan then goes on to tell our undercover journalist that people under 30 are more at risk for heart conditions from the COVID vaccine.

**R** Raja Cholan 03:19

For people that are like, 30 or younger, it really increases your risk. The data does show that I don't even know if these vaccines stop you from getting COVID. They don't. I don't think so. Like, it's supposed to make you less sick if you get it. I don't know if it really prevents.

**J** James O' Keefe 03:36

He is speaking casually, candidly about the risks of the virus, the risks of the vaccine product, particularly as it relates to myocarditis, the lack of effectiveness of the vaccine product. He's saying that it doesn't prevent infection, it doesn't prevent disease. These are statements that I had made back a few years ago that I was called a liar for saying by the Washington Post.

**R** Raja Cholan 04:08

But now there's like, there is some like evidence out that the NIAID (National Institute for Allergy and Infectious Disease), that's where Fauci was the director. Like, they might have funded some labs to, like, do vaccine studies and like disease like to prepare for an outbreak. They might have funded Wuhan, a lab in Wuhan, China, to, like, make the but I believe in the science. I don't believe, like, it seems like too much of a big conspiracy. And generally, now that I'm a Fed like, people in the government do want to do the right thing. Everyone's they're kind of behind this, like, maybe more so at NIH or in Health and Human Services, people like, want to help people improve health. So I don't know that. I believe that these people are all, like,

trying to spread a virus and then, like, then they should go to jail. If NIAD and Fauci were actually doing this, if the proof comes out that they were funding it, maybe they were actually funding it just to, like, be prepared and shit went wrong. They were trying to study a virus so that when it did break, if and when it did break, we would be prepared for the response to it. But instead, they accidentally funded the thing that like caused, I don't know, but hopefully the intentions were good up front, it doesn't like, excuse them, like the six foot rule of remember that like, that wasn't like based on any real evidence that that did anybody.

**U** Undercover Journalist 05:44  
Really?

**R** Raja Cholan 05:48  
And again, I think they were just trying to do the right thing, but it was completely made up. If they had said five feet versus six feet, right or seven feet, like it was all this, they just made it up.

**J** James O' Keefe 05:58  
Does anyone really trust the healthcare system. Thankfully, there still are some good guys left in healthcare, like our great friends at the wellness company. Wellness company has been with OMG since day one, and now they're proud to introduce ultimate first aid emergency kit, meticulously created to ensure your access to life saving prescription medications, personal protective equipment and other essentials by empowering you to take control of your health journey. Now you and your loved ones will be prepared for the next shortage, whatever they try to pull. My team and I have our kits with us in the field at all times. Don't get caught without the medications you need. The Wellness company's first aid medical emergency kit can make all the difference order your medical emergency kit now and save 15% by using code. OMG, that's TWC dot health slash OMG, go to TWC dot health slash OMG, again, that's TWC dot health slash, OMG. Now what's confusing is whether Raja is a villain or not, whether he's a participant in this unethical behavior, whether he's doing his job or just following orders. But we wanted you, the viewer, to be the judge of that.

**U** Undercover Journalist 07:09  
Do you think that of like the mRNA is safe, their evidence shows like myocarditis?

**R** Raja Cholan 07:19  
It definitely increases your risk for that. I think that that's well done now, and Pfizer and moderna are just getting a bunch of money from all these vaccine mandates. I think, like in the like for other vaccines like measles or whatever, you have to go through several rounds of

approval and submit a bunch of data to prove about like side effects and things. But these were accelerated through the approval to write them to the to for all of us to get our base. And they made millions of dollars. I think we're all gonna learn when it's too late?

**U** Undercover Journalist 08:00  
What would make it too late?

**R** Raja Cholan 08:03  
Like it's gonna already have been 10 years down the road, and then a bunch of people will have gotten, like, fall 10 boosters.

**U** Undercover Journalist 08:12  
Why do you wanna get them again?

**R** Raja Cholan 08:13  
if I'm going to get COVID anyway and I'm gonna be all right, why increase my risk for the known myocarditis?

**J** James O' Keefe 08:20  
The very foundation of journalism is to get answers. A common technique by which to do that is called a FOIA, or Freedom of Information Act request. We've submitted many FOIAs, particularly for body cam footage, but then this government official tells our undercover journalist that NIH is intentionally giving orders to make getting a FOIA even more difficult.

**U** Undercover Journalist 08:42  
Is there anything that like, if we found out that we would be like, that would change.

**R** Raja Cholan 08:48  
So do you know what FOIA is? Freedom of Information Act? Okay, so like the press or whoever can like request from the government, show us emails or whatever this article claims that they were like, misspelling words on purpose. So then, if there was a FOIA request for whatever Coronavirus, they misspelled Coronavirus, they were instructed to misspell it on purpose so it wouldn't return on the servers.

**U**

 09:18  
Wow,

 09:20  
Wow, I think

 Raja Cholan 09:21  
I think it's journalists.

 James O' Keefe 09:23  
Raja then brings up politics. Talks about which political party he prefers and what would happen to him and NIH under an incoming Trump administration.

 Undercover Journalist 09:33  
Well, what do you think?

 Raja Cholan 09:34  
I think it would be worse for the NIH. I think it would be better for a Democrat to be in office there's some like Section F, but I don't even know what Section F means. It's supposed to be proposed cuts. And I think where I work at the NLM or library, we sometimes fly under the radar, yeah, of like the really strict guys. I don't think I have too much to worry about either, just like the whole menu.

 Undercover Journalist 10:11  
What happens anti-Vax, anti science with like, anti Pharma? Really.

 Raja Cholan 10:40  
I don't think it would impact you.

 Undercover Journalist 10:41  
I just wonder, like, like, if I was working that department, you know what I mean, I'd be like, I wonder.

 Raja Cholan 10:50

A lot of people might get would probably get fired, or they would retire, and so then you would just be left with a bunch of institutes and divisions that like are understaffed and so anything that RFK would want to do, sorry, that's my guess.

 James O' Keefe 11:09

So Raja questions the vaccine companies, colluding, skipping approvals and creating false guidelines. It all just seems like a bunch of buffoonery. It all seems contradictory. And the question again, is this villainous behavior? Is this corrupt behavior? Is this just government incompetence, to quote Raja, is this just a guy who, "knows shit about nothing". But he clearly knows some things about something, and he says he knows a lot about public health. And the real question is, are these the type of people we want in our government making medical decisions, and that question might be answered by the incoming HHS Secretary, Robert F Kennedy, stay tuned.

 Raja Cholan 11:57

Wait, hold on. Do you know about like honey potting people that like get asked on dates, and then they get asked questions about their work, and then they're like, recording this is like asking me, in my opinion, about these conspiracies. I feel like I'm not supposed to answer that's not recorded, right?

 12:20

But they go Like.
